ABSTRACT

An illustration of a man with a beard, wearing a dark suit and white shirt, walking and carrying a large, dark blue folder. The background is a light gray with faint, stylized outlines of buildings and a grid pattern.

The student management system can handle all the details about a student. The details include college details, curriculum details, students personal details etc. The student management system allows authorized members to access the record of academically registered students. This project helps in maintaining the database of the students in any educational organization. We can easily access any students information anytime and can be kept safely for long period of time without any damage. We are trying to add, update, display, delete records and export students details through this student management system.

Introduction:

Schools and Universities are the foundation of knowledge and an educational body on which students rely upon. Therefore, they need to maintain a proper database of its students to keep all the updated records and easily share information with students. Student Management System (SMS) is a solution tool that is designed to track, maintain and manage all the data generated by a School, including the grades of a student, their attendance, their interpersonal activities records, etc.,
